

MCCARE® MFCOLDER SECURE DOCUMENT SHARING

MCCare® MFolder provides an easy way for your business to share and sync important data across multiple platforms, while keeping security a top priority. The dashboard allows administrators to keep strict policies based on your organization's needs.

FILE ACCESS FROM ANYWHERE

Keep all of your data, whether it is presentations, spreadsheets, pictures or other important files with you wherever you go. Freedom to work from smart phones, tablets, desktops, the web and laptops. Anytime a file is updated, be assured, it will be updated across all of your devices for universal file access.

SECURITY UNMATCHED

MCCare® MFolder offers military grade, 448-Bit Blowfish, encryption. Data is encrypted both in transit and at rest in the cloud, with SSL to ensure data transfers. MCCare® MFolder allows for two-factor authentication for extra security measures.

BUSINESS LEVEL COLLABORATION & SHARE FILES WITH EASE

It is easy to collaborate on files using Team Shares in MFolder. Multiple people can access and share a folder and its contents through phones, tablets and other machines. Anytime a file changes on your Team Share, everyone will get updated instantly on every device.

Share files and folders with anyone, not just other MFolder users, with one click of the mouse. When sharing files with outside parties, you can add expiration dates, track downloads and include messages. This feature is a great replacement for large email attachments and FTP.

TRACK ACTIVITY, ACCESS REVISIONS & DELETED FILES

MCCare® MFolder's Activity Log tracks when users add, delete, or change files. Know when colleagues have made changes to files in your shared folders and restore previous versions or deleted files when needed.

MCCare® MFolder keeps deleted and changed files. Easily download or restore deleted files or previous versions for as far back as you need. Revisions are a great way to go back in time.

CLOUD ENABLE YOUR FILE SERVER

MCCare® MFolder allows remote access to your file server when working outside the office. MCCare® MFolder maintains a bi-direction sync with your local file server and the cloud, so changes made on the server will be synced to the cloud and vice versa. This can replace the need for unreliable and complex VPN and FTP.
